

## Can the RECKLI Formliner<sup>ECO</sup> Already Be Purchased?

---

The RECKLI Formliner can be ordered immediately and is available for every RECKLI Formliner product, whether it be SELECT, UNIQUE, or VISUALS.

We have established the necessary processes to track and ensure that everything from the waste producer to the raw material manufacturer and to us is transparent. This allows us to contribute to making your project as resource-efficient and sustainable as possible.

Simply contact us. We will help you with questions and the ordering process:

## Which Organization Issues the Certificate?

---

The International Sustainability and Carbon Certification (ISCC) is an independent initiative and a leading certification system.

It supports sustainable, fully traceable, deforestation-free, and climate-friendly supply chains. In a comprehensive audit, our entire supply chain was examined, starting from the supplier of raw materials to the finished product. We are now proud to be able to offer certified sustainable products.

## Sustainable Formliner – How is it Achieved?

---

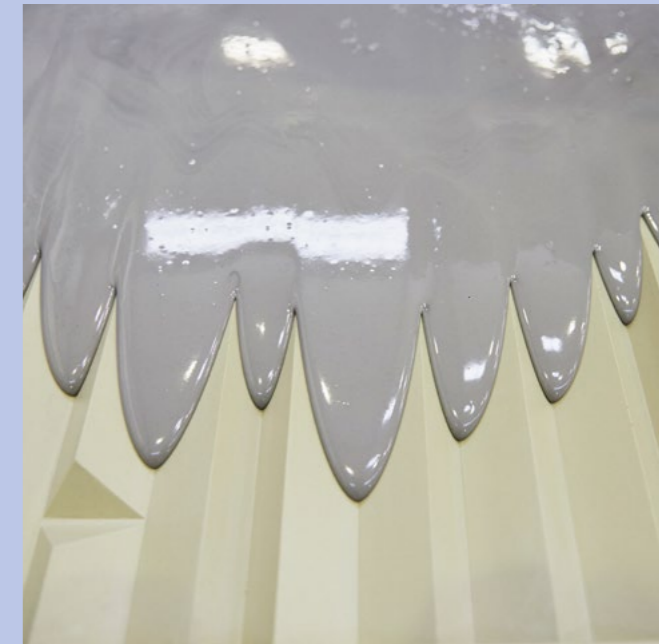

The sustainable formliner, the RECKLI Formliner<sup>ECO</sup>, is made from certified sustainable raw materials.

Our Formliner<sup>ECO</sup> is composed of polyurethane, produced in our factory in Germany. The petroleum products we use for our polyurethane are now obtained from renewable raw materials or from industrial waste, maintaining the accustomed RECKLI polyurethane quality. Reusability, durability, and fidelity of detail in your mold remain consistently excellent.

## RECKLI-Formliner<sup>ECO</sup> The world's most sustainable Formliner

As part of the resource-intensive construction industry, we see it as our responsibility to make our products and processes as sustainable as possible. A milestone in this effort: Our molds in certified sustainable execution.

# 1 Composition of Raw Materials

We source our raw materials from selected partners. They consist of:

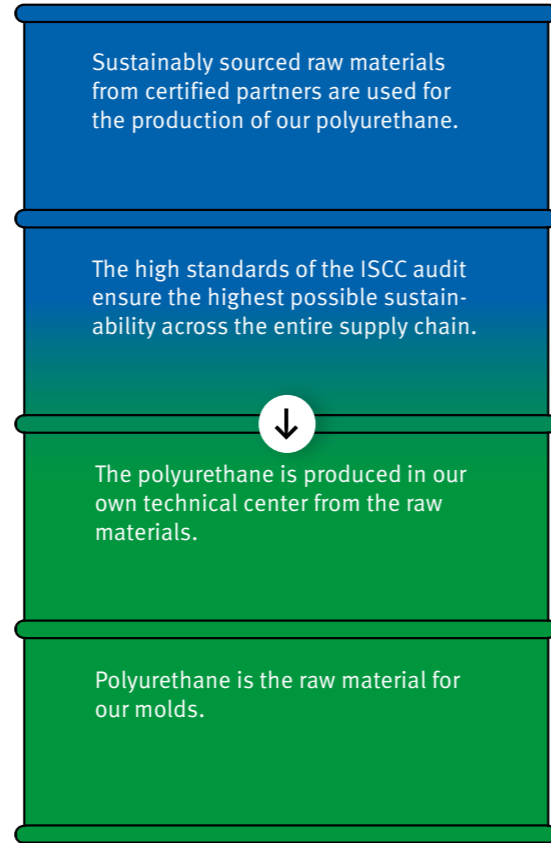

Up to **90% renewable raw materials**, in varying components composed of:

only ~ **10% fossil-based** raw materials.

# 2 Production of the Raw Material Polyurethane

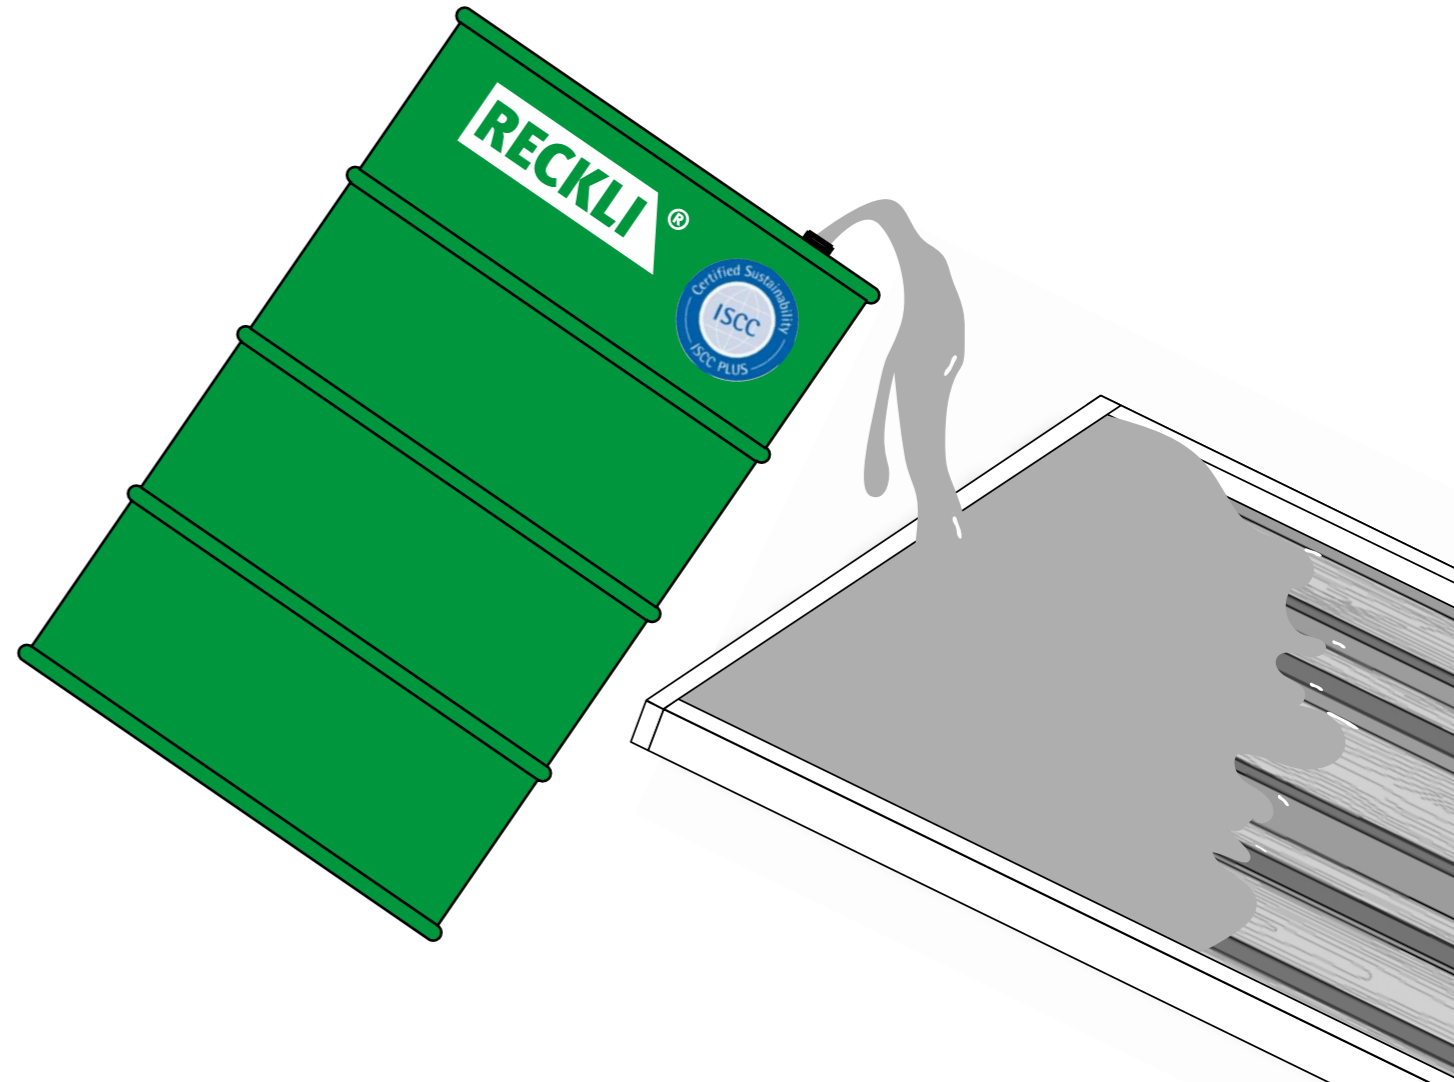

Like all RECKLI Formliners, the Formliner<sup>ECO</sup> is made from our in-house polyurethane, specifically developed for use with architectural concrete.

# 3 Production of the Sustainable Formliner

Our sustainably obtained polyurethane is cast into molds upon customer request, with any of our structures and product series eligible for use.

Naturally, the mold can be **used as usual up to 100 times**.

# 4 RECKLI-Formliner<sup>ECO</sup>

The result is the especially **sustainable Formliner<sup>ECO</sup>**. We are the only manufacturer worldwide to offer molds that meet the strict sustainability requirements of the ISCC.
